• Phosphorus fertilizer application

 I suspect you're right. I'm not sure if it's a color calibration issue or a rendering issue. The colors in the image look correct to me.

Figure 1. A schematic diagram of the experimental setup. The light source (laser) emits light at a wavelength of $\lambda = 532$ nm. The beam splitter (BS) splits the beam into two paths. The first path contains a lens (L₁) and a polarizer (P₁). The second path contains a lens (L₂) and a polarizer (P₂). The two paths converge at a point where they are imaged onto a camera (C). The camera captures the interference pattern.
